

Isabel Muñoz, MPH

Research Associate

Isabel Muñoz is a Research Associate for ANSIRH's ADAPT study and will be recruiting participants and collecting data in the Southwest. After interning for Ibis Reproductive Health for approximately a year and a half, Isabel knew she wanted to continue conducting research on sexual and reproductive health. She is interested in understanding access to reproductive care and has background in qualitative research in the US. Isabel is passionate about reproductive justice and conducting research to improve access and the quality of care for marginalized individuals. Isabel studied

Human Biology at University of California, Santa Cruz as an undergrad and received her MPH in Epidemiology and Biostatistics from the University of California Berkeley in 2018.

Research projects and studies

ADAPT Study: Attitudes and Decision-making After Pregnancy Testing. Nearly half of pregnancies in the United States are considered “unintended,” and at least half of these pregnancies are carried to term. Although accidental pregnancies are common, evidence about how women make decisions about their pregnancies and the health care they want and are able to obtain is surprisingly limited.
